

AUDIO INTEGRATION

FOR MICROSOFT SKYPE FOR BUSINESS CONFERENCES

Improve your communication channels und optimize your conference experience with Microsoft Skype for Business and audio integration from Telekom.

The solution from Telekom allows a connection to be made between local and free-of-charge international dial-in numbers and your Skype for Business server. This can permit people to come into contact who are not online, do not use compatible devices or do not have Skype for Business.

By means of server-sided native Skype for Business audio integration, it is also possible in these cases for conference participants to take part in Skype for Business meetings using 100 international dial-in phone numbers and to use the excellent audio quality with the extended management possibilities of Skype for Business conferences. The solution creates a connection between VoIP participants and PSTN participants in a Skype for Business conference.

Through native integration in Outlook or your calendar, conference invitations with all necessary information can be sent out very simply to all participants permitting you to start immediately.

ADDED VALUE FOR YOUR ORGANIZATION

- Local and Freecall dial-in in more than 100 countries
- 24/7 support for audio conferences
- No additional user administration
- No administration of bandwidth for PSTN participants
- Resource and cost saving
- Simple budgeting and uncomplicated commercial billing

LIFE IS FOR SHARING.

IMPROVE YOUR COMMUNICATION CHANNELS WITH SKYPE FOR BUSINESS AUDIO INTEGRATION

Intuitive use

Simple management functions support the execution of the meeting and the user administration.

Audio integrated dial-in possibilities

Simply dial the desired dial-in possibility and connect to the meeting:

- Local dial-in
- Freecall dial-in
- Dial-out

Interoperability

Native interoperability enables smooth communication between internal and external participants in a Skype for Business conference system.

Tried -and -tested solution

A solution certified and recommended by Microsoft that guarantees international accessibility in more than 100 countries.

Easy to implement

The optimized use of the existing infrastructure and bandwidth quickly establishes the solution in the entire company and guarantees a high-quality meeting experience.

Barbell connection

The on-premise Skype for Business server pools and the global conference platform are connected. The connection consists of an audio channel, the so-called Barbell connection. For each conference an audio channel and an additional signalling connection are set up via the Internet.

Various connection options

A connection with the Skype for Business infrastructure is set up either by PSTN, MPLS, or by a VoIP connection via the Internet.

Operator support

Press *0 at any time to leave the telephone conference, ring the hotline, or send an e-mail if help is required.

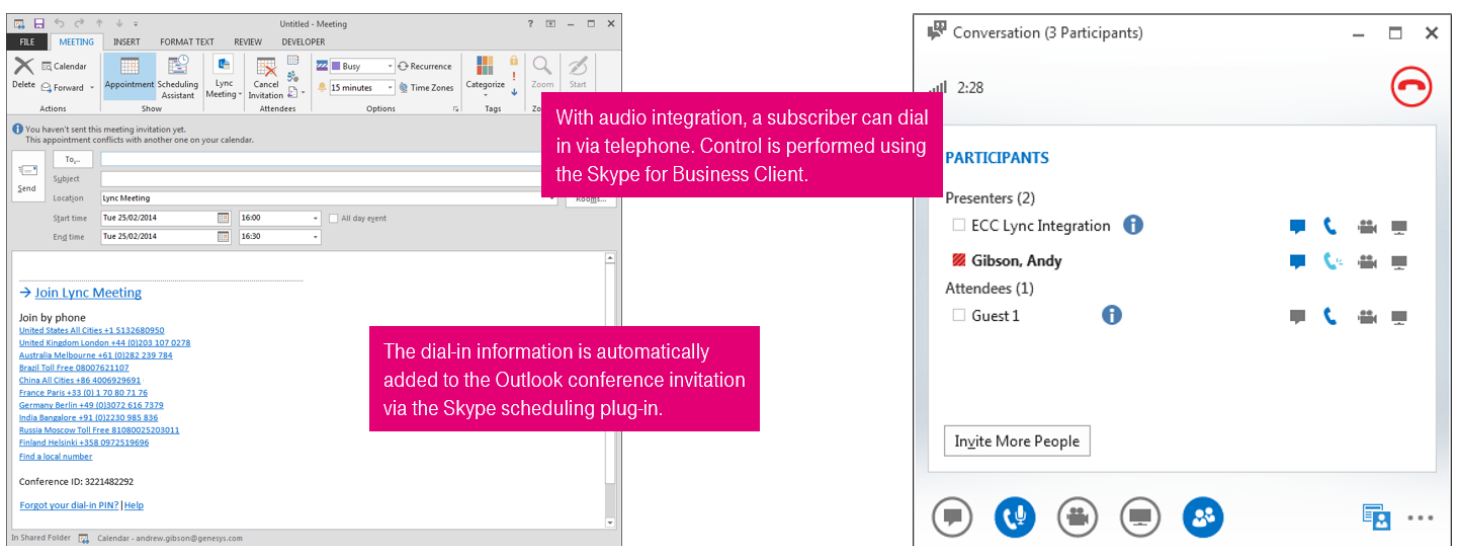

Increased productivity

Productivity can be increased by bringing working groups together in meetings at short notice, irrespective of their location.

Simple budgeting

Straightforward commercial billing proves to be uncomplicated and reliable – on the Telekom bill.
